P3 fax

P3fax is the latest web based fax and messaging solution from Wordcraft International. P3fax replaces Unimessage Pro bringing the original solution up to date. The latest in web technologies have been included to provide the user with a more user friendly and robust solution.

The most cost effective way to send and receive faxes is electronically, straight from your desktop. P3fax can be used with an existing e-mail application or on its own.

P3fax is an ideal solution for fax broadcasting, whether from a mail-merge or from other applications like SAP, any company address book including personal e-mail address books can be used.

With P3fax a document can be automatically routed to a pre-specified destination based on a DDI number, fax ID, name etc.

Embedded commands are an additional feature to give you more control when sending and creating faxes.

P3fax can be managed from anywhere on the network using a web-browser interface. Once set-up, however, there is very little technical management involved as there is no software which needs to be installed on the user's workstation. The simplicity of P3fax means that there is little overall maintenance required.

From version 2 onwards P3fax will run completely as a service, no longer requiring the server machine to be logged on as a windows user. This feature has been specifically requested by our OEM partners.

An iPhone application, P3fax Mobile, which can be used to link to the office fax server for sending and receiving faxes whilst on the go, will be released soon and available to purchase from iTunes.

For the latest in MFP communication, messaging and management solutions. Contact us or visit our website on www.wordcraft.com.

Recommended minimum specification: 1 Ghz Intel/AMD processor, 256MB of RAM (512MB recommended), 1 GB free space on hard disk, windows 2000 or above, TCP/IP network.

Contact the Wordcraft team for a demonstration, pricing or technical specification.
